General Description

The YC1178 is a very low power, high performance and highly integrated Bluetooth 5.0 BR/EDR/BLE , designed for operation over the 2400MHz to 2483.5Mhz ISM frequency band.

YC1178 is manufactured using advanced 55nm CMOS low leakage process, which offers highest integration, lowest power consumption, lowest leakage current and reduced BOM cost while simplifying the overall system design. Rich peripherals including an 8-channel general purpose ADC, power-on-reset (POR), Arithmetic Accelerators, UART/SPI/I2C and up to 38 GPIOs, which further reduce overall system cost and size.

YC1178 operates with a power supply range from 1.8 to 5.5V and has very low power consumption in both Tx and Rx modes, enabling long lifetimes in battery-operated systems while maintaining excellent RF performance. The device can enter an ultra-low power sleep mode in which the registers and retention memory content are retained while low power Oscillator and sleep timer is ON.

- (1) HVIN & HVOUT are input & output of a high voltage LDO which is integrated in YC1178, input voltage range from 3.1~5.5V, and maximum load capability upto 50mA. Typically used in Li_BAT (3.2~4.2V) or USB_Power(4.5~5.5V) applications. If input voltage is lower than 3.6V, HVIN & HVOUT should be left unconnected and YC1178 should be powered by VIN/VINLPM/VINPA directly.
- (2) If RF output power should be larger than -4dBm, VINPA should be larger than 2.5V.
- (3) VINLPM should always be powered ON in all working cycles.
- (4) VIO should always be powered ON in all working cycles.
- (5) Drive capability of GPIO[20:30] is up to 100mA, other GPIO's drive capability is 10mA
- (6) By default, 2kB retention memory is ON in retention mode. Up to 4kB retentionable X_memory available at the cost of extra 600nA retention mode current. Besides, 16kB 51-code memory is also retentionable at the cost of extra 1.6uA retention mode current.
- (7) Result based on standard gain mode
- (8) Result based on -2dBm Pout
- (9) 16M, 24M, 26M, 32M crystal supported, 24M by default

Crystal Oscillator

The crystal oscillator requires a crystal with an accuracy of ± 30 ppm as defined by the Bluetooth specification. Two external load capacitors in the range of 5 pF to 30 pF are required to work with the crystal oscillator. The selection of the load capacitors is crystal dependent. The recommended crystal specification shows below.

Recommended Oscillator Configuration — 20 pF Load Crystal
